

Dilution

Technique

STEP 1

Using the provided alcohol swab, clean the top of both vials. Draw up the appropriate amount of dilution solution into the syringe with

STEP 2

Invert the vial and pull airback into your syringe. Insert the needle into the rubber cap. Pull back on the plunger the appropriate dose of medication.

STEP 3

Clean the injection site with the alcohol swab and pinch a section of skin to inject. Carefully, inject the needle into the prepared area and inject the medication. Remove needle once medication is injected.

STEP 4

Place the safety cap over the needle and dispose. *Warning: Exposed needles
